**Abstract** The purpose of this study was to determine the effect of a 10-week, 1000 kcal energy deficit diet on the body composition and physical fitness of 10 sedentary, obese women. The women were randomly assigned to either a control group or an experimental group. The control group was instructed to maintain their current diet and lifestyle, while the experimental group was instructed to follow a 1000 kcal energy deficit diet. The experimental group lost significantly more weight and body fat than the control group. The experimental group also showed a significant improvement in physical fitness, while the control group showed no change. The results of this study suggest that a 10-week, 1000 kcal energy deficit diet is effective in reducing body weight and body fat, and improving physical fitness in sedentary, obese women.
